VOLUME 18, ISSUE 5

AUGUST NEWSLETTER

SAW TIME

As we approach mid-year, saw time remains limited due to strong demand for 2 1/4" blasted oversize and 6" garden steps. This demand has kept the saws running at full capacity, making it difficult to maintain our usual inventory levels. To reduce waiting times for next year's orders, we plan to purchase and install a new wire saw in early spring 2027. This added capacity will significantly increase production and help maintain consistency if one of the large saws goes down.

WHAT'S IN STOCK

2-3" oversize smooth (large size) – 6x8", 8x8" sawn wallstone – 1.5" – 2" flagstone – Large pebble top slabs 3-4", 5-6"- small armour wire wrapped skidded 6-7" – 3-4" oversize pebbled top

Please contact us for current availability, as stock levels can change quickly during the season.

LOOKING AHEAD

We are continuing to monitor production timelines closely and will keep customers updated as availability changes throughout the month.

The Georgian Bluffs Quarry will produce oversize flagstone in 1–2" and 2–3" thicknesses, with both regular and large sizes available. The 2–3" material continues to come out strong and should remain available into the fall. Because the material is thicker than usual, we are also seeing a strong run of 1.5–2" random flag. Flagstone in ¾–1" and 1–1.5" thicknesses will also be produced.

The Mar Quarry is extracting armour stone in 12–14", 22–24", and 28–30" heights, in various sizes. Large 3–4" and 5–6" slabs have recently been pulled, with strong stock now available for upcoming projects. Oversize 3–4" material has been skidded, and 1–2" oversize will be extracted this month, along with some random flag being palletized.

The Wiarton Quarry will split basal material for building stone in 2–6" x 4", 6–10" x 4", and mixed-rise 2–10" x 4" sizes. The larger saws will continue cutting 2 1/4" and 6" thick oversize and garden steps for blasting. Some cleft building stone will also be cut into standard heights.
